

# Dragon Fire

O C E A N M I S T

## The Constellation Draco

### Find the Sky Dragon in the Night Sky

The sky dragon in the final beach scene of *Dragon Fire, Ocean Mist* (p.190-191) where all the dragons are looking at the northern lights is actually the constellation Draco. Draco is a huge constellation located between the Little Dipper and the Big Dipper. It's a little faint in the night sky but on a dark night you can make it out.
